

Supplies for mobile, desktop and industrial label printers

Supplies Guide

www.brother.co.uk/supplies

Brother supplies

Our range of paper, ribbons and labels offer technology that protects the printhead, reducing wear and tear and giving you greater performance. Suitable for a range of Brother thermal printers and for use across various industries to meet your printing needs.

Why choose Brother supplies?

- Brother has decades of manufacturing experience and expertise.
- Brother products are evaluated and tested under a variety of conditions.
- All printers and supplies produced by Brother are constantly being redesigned and improved based on customer feedback and industry demand.
- We will work with you to replicate any printing problems you've experienced and recommend the best supplies for your solution.

By using Brother supplies you can enhance the quality and performance of your Brother equipment, giving you:

- Longer life for your Brother printer.
- Superior performance.
- Highest quality output.
- Minimal jamming or malfunctioning of equipment.

You will always achieve the best print when your printer, ribbon and other supplies are all matched to your specific requirements.

Media types

Thermal paper (full page)

Whether you need cut sheets or a continuous roll, we have paper supplies perfect for thermal printing without ink for use with our PJ mobile printers.

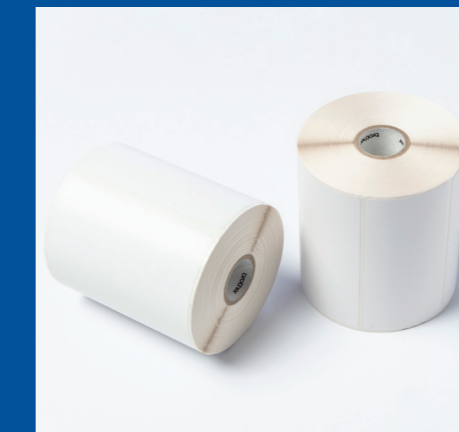

Print invoices, certificates and other documentation with ease whilst on the move.

Die-cut labels

Our supplies range includes coated and uncoated label options in variable lengths and widths.

Find the label that best suits your requirements - whether it's shelf edge labels, shipping labels or even blood bag labels.

Ribbons

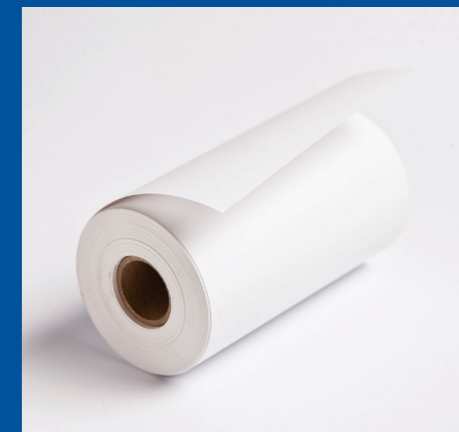

All Brother ribbons are tested rigorously to ensure they offer the best quality prints.

Our black ink ribbons come in a range of widths and lengths for use with our TD-4T series and TJ series printers. They are also available in a variety of standard or premium wax and resin ribbons.

Continuous paper rolls

With a range of lengths and widths available, our continuous paper rolls are compatible with Brother RJ and TD printers for a variety of applications including receipts, tickets and fines.

Healthcare

- Appointment cards
- Admission labels
- Specimen and pathology labels
- Blood bag labels
- Laboratory labels
- Microbiology labels
- Dosage/drug bag labels
- Autoclave and sterilisation labels

Retail

- Pricing labels
- Barcode labels
- Shelf-edge labels
- Sale, mark-down and discount pricing labels

Food labelling

- Pricing labels
- Barcode labels
- Pre-packaged food ingredients labels
- Nutrition information labels
- Expiry dates
- Frozen food labels
- Pasteurised product labels

Public safety

- Parking tickets
- Recording of accidents and crime scenes
- Warning notices

Which label printing technology is right for you?

Direct thermal

Direct thermal printing is when a printer selectively heats parts of the thermal paper when it passes over the printhead to produce a printed image, meaning no ink is needed.

This type of printing is the best option for short-term labelling solutions when the labels are not subjected to harsh conditions. Direct thermal labels have a comparatively short lifespan due to text and barcodes fading over time but they provide a more cost effective labelling solution as there is no need to buy ink or toner.

From shelf-edge labels to stock rotation labels – there are a range of applications where direct thermal printing is the best option.

Thermal transfer

Thermal transfer printing is a printing method in which material is applied to paper through melting a coating of ink ribbon which then adheres to the paper to display text and images.

If your labelling application needs to last for a longer amount of time or is likely to be exposed to tough conditions, such as direct sunlight or extreme temperatures, thermal transfer printing is the better printing technology for you.

Thermal transfer printing is more commonly used for labelling applications where durability is key, for example, in food production or healthcare environments where varying temperatures need to be considered.

Transport & logistics

- Shipping labels
- Carton labels
- Location labels
- Pallet identification labels
- Quality control labels
- Compliance labels

Field workforce

- Receipts and invoices
- Estimates and quotations
- Statements of work
- Work orders
- Maintenance and service reports

Emergency services

- Patient records
- Care plans
- Incident reports
- Recording of accidents and crime scenes

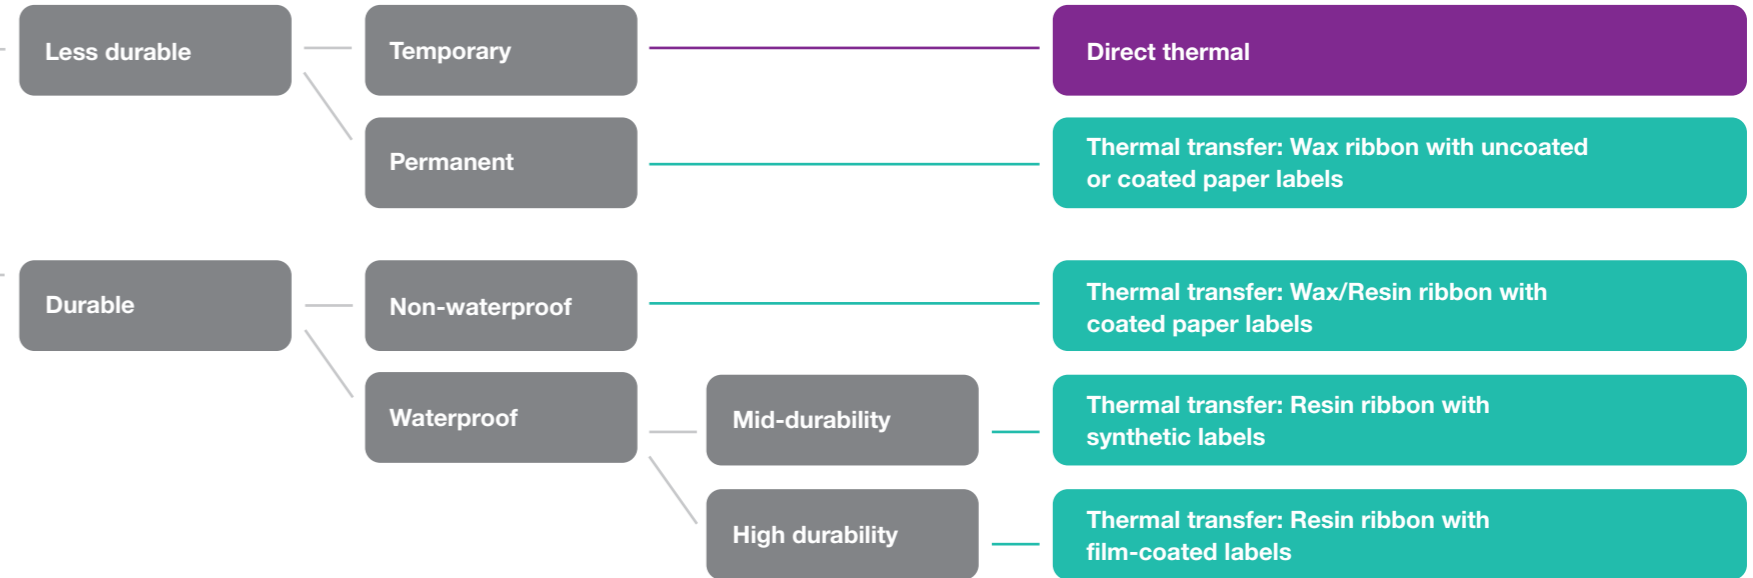

Field sales

- Receipts and invoices
- Quotes
- Statements of work
- Legal documents
- Certificates

Which label is right for me?

Thermal printing

Which labels are right for me?

Direct thermal labels

Direct thermal labels need to be used with a direct thermal label printer and are best suited for short label lifespan applications.

This inexpensive label type is perfect for temporary applications like eCommerce address labels.

Uncoated paper labels

Uncoated paper labels for thermal transfer printing offer superior barcode printing to direct thermal labels and the print outs are much less likely to fade.

These labels are typically used when a long-lasting label is required.

Coated paper labels

For better quality thermal transfer printing, coated paper labels offer a more premium label print when high barcode resolutions are needed for scanning.

Coated labels are often used in retail, logistics and food labelling applications.

Synthetic labels*

Synthetic labels are the perfect choice for durable labelling applications that need to last in varying conditions while being resistant to fading and discolouration.

These labels are ideal for long-term label packaging, patient and laboratory samples, as well as retail packaging and shipping labels.

Film-coated labels*

Film-coated labels offer durability for outdoor conditions that involve UV, heat, chemicals, water/moisture or abrasions.

If you are looking for tear-resistant labels, resealable labels or labels that can resist harsh conditions - these are the ones for you.

* Contact your local Brother sales representative for further information about these supplies. All label types except for direct thermal require a thermal transfer ribbon for printing

Custom labels

Our custom labels support specialist labelling applications, from sample testing in healthcare to identifying components in manufacturing. We offer a choice of label materials including direct thermal, uncoated, coated, synthetic and film-coated.

Certified by Brother UK, our custom labels are rigorously tested, and are available to order in a range of sizes, volumes, roll diameters, colours and pre-printed options.

Thermal transfer printing

What ribbon supply is right for me?

Ribbon	Ribbon Type	Label Compatibility	Example Applications	Durability		Material variety		Sensitivity		Print quality		Cost
