

**Customer Name:**

South  
Staffordshire  
and Shropshire  
Healthcare NHS  
Foundation Trust

**Product:**

PJ-623

**Challenge:**

Needed a way to record service user information from within the community and leave a copy of the care plans with the service users.

**Solution:**

Brother's mobile printer offered the quality and mobility to meet the challenge of printing while on visits.

**Benefit:**

Consistency of care for service users, ability for healthcare staff to complete service user notes just once (rather than creating one for the office and one to leave in service users' homes).

“ Our community based clinicians visit service users in their own homes. They record details of each and every visit electronically but, to ensure consistency of care, we wanted to be able to leave print outs of care plans with service users. Brother's mobile A4 printer (PJ-623) was recommended to us, so we ran tests on our systems for reliability, quality, clear print outs and robustness. The printer worked exceptionally well, printed clear accurate reports and could withstand being knocked about from visit to visit. We have since bought over 500 devices as part of the planned roll-out. ”
